

ASSET LIFECYCLE MANAGEMENT

GET MORE OUT OF YOUR TECHNOLOGY

Sprawling and fragmented IT environments create a challenge for organizations when it comes to tracking and managing hardware and software assets. You need visibility into your network to monitor infrastructure and software, understand usage and utilization, and manage licenses, service contracts, and security updates.

The **BlackHawk Data** Asset Lifecycle Management team understands that your IT investment is about more than just capability and ROI. Every technology purchase must fit within the cohesive strategy of your organization. That's why we provide consolidated management of all assets, firmware and OS versions, security patches, software licenses, service and maintenance contracts, and users.

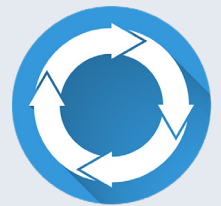

“Every technology purchase must fit within the cohesive strategy of your organization”

— JASON CAPAROSO, PRESIDENT,
