

Network-as-a-Service Establishes a Foundation of Enhanced Revenue Opportunities

Shared office spaces have enabled many organizations, in a variety of industries, to benefit from a full-service office environment without any of the common hassles of leasing conventional office space. Private offices, furniture, shared lobby and conference areas, and building maintenance are all covered, have tenants' IT needs been addressed?

When commercial tenants move into the building, they're faced with the long and cumbersome process of procuring and integrating their IT — from setting up a network to provisioning PCs, from Wi-Fi and IP phone services to digital and physical security. It's not only a huge hindrance to getting up and running immediately, it also can drain capital resources, making the entire move questionable for their business's profitability and success.

Property management companies wanting to set themselves apart to benefit from the growing shared space trend are faced with the challenge of providing for tenants' unique office needs, particularly when it comes to IT.

BlackHawk Data Makes IT Happen

BlackHawk Data's Network-as-a-Service is the easy button for property managers and tenants. It's the quick, efficient and secure way to ensure your tenants have the technology they need so they can move in and start working on Day 1.

We take care of all the set up so all your tenants have to do is sit down and get to work. Plus, we provide a 24x7 helpdesk that can monitor and manage your tenants' IT — from desktop and network support to updates and security monitoring — so all they have to think about is growing their business. And our services scale with them as they grow.

We're your property's built-in IT department complete with industry experts that have decades of experience and a wealth of certifications in a variety of technologies.

What this means for the building owner:

- Expand revenue streams by offering additional business services
- Elevate the tenant experience with 24x7 network monitoring and immediate response times to their IT needs
- Protect tenant investments and your own with digital security and physical security of each office and the entire building
- Provide cybersecurity insurance giving tenants peace of mind and strengthening your security posture
- Gain recognition as a pioneer (and increase demand) by providing white-glove business

What this means for the tenants:

- Increased efficiency and no tech worries starting on Day 1
- Budget-friendly operational expense instead of up-front capital expenditures for equipment and IT management
- Enterprise-grade internet services and network security
- Immediate connectivity with IP phone set up
- PC, laptop and printer installation prior to start of business
- Ongoing maintenance and helpdesk support covered throughout lease term

BlackHawk Data helps you build happier and more loyal customers while generating greater revenue and on-going positive brand awareness.
